DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1- have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Asano et al. (6,926,984).

Asano et al. teaches in column 10 Example 1, an ion-conducting, aromatic polymer membrane made of a sulfonated polyarylene represented by Formula (4) which is formed into a polymer electrolyte membrane (1). Diffusion layers (21, 31) were also formed. Catalyst particles comprising platinum carried on furnace black at a weight ratio of furnace black:platinum=1:1 were uniformly mixed with a solution of an ion-conducting binder to prepare a catalyst paste where the platinum content was 0.5 mg/cm² and then formed into catalyst layers (22, 32). The polymer electrolyte membrane (1) is sandwiched by the catalytic layers (22, 32).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rozhanskii et al. (7,163,988) teaches a proton-conductive membrane for a fuel cell in which the membrane comprises a polymer solid electrolyte comprising a polyarylene having a sulfonic acid group. Rozhanskii et al. teaches in

column 3, that the polyarylene comprises repeating structural units derived from an aromatic compound which contains at least repeating structural units represented by the formula (1').
